

CISC 310 Final Project

Checkpoint #2: due Monday, November 10, 2014

IF YOU CHOSE OPTION A, YOUR CHECKPOINT IS: ANNOTATED BIBLIOGRAPHY

You should be tracking down the sources you are going to use for your project. These will need to be good, high-quality academic sources. You may use trade publications, and in some instances, even marketing materials. However, you should make sure you have a number of academic sources as well. You will want to make sure that you are using a variety of sources to thoroughly research your topic.

For this checkpoint you will need to turn in an annotated bibliography of *at least* five sources that you will be using for your project. These sources should be cited in correct APA format (<https://owl.english.purdue.edu/owl/resource/560/05/>)

Each citation should be followed by a paragraph that:

- Concisely summarizes the content of the source
- Describes how the source will be used in your paper

This paragraph should be thorough and should be well written AND PROOF-READ!

IF YOU CHOSE OPTION B, YOUR CHECKPOINT IS: CODE UPDATE PLUS MINI BIBLIOGRAPHY

You should write an approximately 1 page update on the state of your simulations. You should outline what code has already been written along with describing what additional code you plan on writing. You should make sure you include any preliminary results as well. In addition to the code update, you should turn in an annotated bibliography containing 2 sources (see requirements above).

EVERYONE

All groups, regardless of which option you chose should include a 1 paragraph write up that describes at least two things you have learned while researching your project, any challenges you are having and the next steps your group plans to take.
